To create AutoCAD Activation Code drawings, the user first loads the drawings by clicking the "AutoCAD" icon on the desktop and loading an AutoCAD drawing. The user then chooses the drawing mode (drafting mode or design mode) and creates a new drawing or edits an existing drawing. If the user loads a drawing, it is displayed at the same size as in the original drawing. The user can scale, move, rotate, mirror, and print drawings. The user can make annotations in the drawings as well as insert objects and other drawings. The user can arrange multiple drawings into a library, group, or collection, and save the collection as a drawing template. The user can easily convert drawings from one file format to another. In the drafting mode, the user can rotate, scale, and mirror (rotate 90° and align the origin) objects. In the design mode, the user can create linetypes, erase, and digitize existing objects. A collections window in AutoCAD and similar software allows a user to easily save and recall collections of drawings in a computer file or as a drawing template. Autodesk developed

AutoCAD as a desktop CAD system because a number of characteristics of such systems made it ideal for desktop applications: Computer users were mostly working at the desktop. In 1982, 80% of the user population were on the desktop in some form. Desktop applications were portable and easy to run. If users had their own computer, they were more likely to use the software than if they were limited to using a mainframe computer or minicomputer. Computer users were mostly working on the same tasks and projects as each other. AutoCAD could run on a wide range of desktop platforms:

personal computers (PCs), minicomputers, and mainframes. AutoCAD used most of the same drawing commands as other desktop CAD programs, so it was familiar to users of similar programs. In an era when a PC sold for less than \$1,000 and most people who purchased one wanted to use it for word processing and spreadsheet programs, AutoCAD was not out of place on the desktop. As the price of PC hardware plummeted, so did the price of AutoCAD. In addition, in 1985, when a user could purchase a \$2,000 AutoCAD system, a \$20,000 mainframe computer, and a \$150 personal computer, AutoCAD could be the only commercial desktop
