We have been a
mainstay in radio
broadcasting in Asia
for over 30 years.

We offer a strong
inventory of
broadcasting
products for
commercial,
educational and
government

broadcast
applications.Q:
Difference between
'this' and 'this.proxy'
in Typescript
interface for abstract
class So I need to
implement a method
in an abstract class
without the need to
know what type of
instance the method
is being called from.
For instance I have
this code abstract
class Test { abstract
proxyFunction(): any;

```
public abstract
method(): string; }
and then for this
class TestMethod
extends Test { public
method(): string {
console.log("I am
method, a method...
think."); } } I could
probably do this as
follows: class Test {
public method():
string {
console.log("I am
method, a method...
think."); } } interface
Test {
```

proxyFunction(): any;
} I am trying to
understand the
difference between
this and using
this.proxy or
