Edition Bing NOOK Color In digital image processing, a digital image is a two-dimensional representation of a scene or object consisting of units, called picture elements or pixels. Digital images may be made of anything visible or invisible, including objects like stars, people, and landscapes or images like planets and atoms from . Wireless internet, which is provided through Wi-Fi, Bluetooth or infrared technology, is becoming increasingly popular. This standard has been around since 1980 and is referred to as IEEE 802.11 and has become a global standard. The amount of data present in a digital image can be represented by the number of pixels. In digital images, pixels are arranged in a regular rectangular pattern where the value of each of these pixels indicates the color and intensity of the original image. Pixels can be separated into monochrome or grayscale images, and from more than one color.
